

Capstone: Build It for the Web — Submission

Computer Science & Robotics | Good Hope Country Day School

Student Name	
Project Title	
Date	
Address It's Hosted At	http://

1. What You Submit

Check off each item once you have it ready. Upload everything together — see “How to Submit” below.

- ☐ Your working code — the whole project folder, every file it needs to run
- ☐ site_server.py — the script that hosted it
- ☐ The address it was served at (filled in above)
- ☐ Screenshot of it running on a device that is not the Pi, address bar visible
- ☐ Screenshot of your project folder on the Pi
- ☐ Your written explanation (Section 3 below)
- ☐ If you followed a tutorial: which one, a link, and what you built that it did not (Section 3f)

2. Project Info

One or two sentences. What did you build?

If you took the tutorial route instead of from-scratch: which tutorial, and a link.

3. Written Explanation

Cover all five. This is worth 25 of the 100 points.

a. What it does.

Plain words, no jargon you would have to explain.

b. How it works.

The main pieces and how they fit together.

c. Which skills you used, and where.

Name the file and roughly where in it.

d. What went wrong, and how you worked it out.

This is the most interesting section, and students always write the least here. A problem you solved is worth more than a feature that went smoothly.

e. What you would add with another month.

f. If you followed a tutorial (optional):

Which one, a link, and a paragraph on what you built that it did not.

4. The Walkthrough (in class, not written here)

Three minutes with your code open. Mr. Krigger points, you explain. Be ready to open any file and explain any line. For anything AI touched: be ready to change it, live, while he watches. You cannot revise for this — if you built it, you will be fine.

5. How to Submit

Upload all of it together

Upload this filled template, your zipped project folder, site_server.py, and your two screenshots to Schoology as replies to the assignment. Not a shared link — the files themselves.

How This Is Graded

By the capstone rubric, 100 points total.

Category	Points	What that means here
It works	35	It runs, it is hosted, somebody else can use it without you standing there
Skills integration	25	Two or more skills genuinely combined, or one pushed to real depth
Explains it	25	The written document, plus the walkthrough
Creativity and ambition	15	Did you reach. A safe project done perfectly and an ambitious one that mostly works can score the same here

Bonus: +3 points for a middle school student who completes the Stretch.

For Teacher Use

- ☐ Meets Base
- ☐ Meets Base + Stretch
- ☐ Needs Revision

Category	Points	Score	Notes
It works	35		
Skills integration	25		
Explains it	25		
Creativity and ambition	15		
Stretch bonus (MS only)	+3		
Total	100
